

SCA Tissue Offers Total Tork® Solution For Every Sanitary Paper Need

SCA Tissue, a leader in away-from-home tissue products, features Tork® product solutions that maximize hygiene and minimize waste and maintenance in every setting.

From office and plant washrooms, to cafeterias and break rooms, Tork offers a coordinated system of quality and hygienic towel, tissue, soap and wiper products that provide a total solution for all sanitary paper product needs.

Tork Touch-Free Dispensing: Tork Intuition, Tork Matic

Topping the list of innovative Tork washroom products are the touchless electronic Tork Intuition and the touchless mechanical Tork Matic dispensing systems.

The Tork Intuition dramatically improves hygiene and virtually eliminates cross-contamination, making it the perfect choice for image washrooms. Utilizing a patented microchip sensor that automatically detects the presence of a hand, Tork Intuition ensures that patrons touch only the towel they will use. A distinctive sleek design keeps towels completely closed until needed, conforming to HACCP guidelines.

Tork Intuition also features an adjustable towel length, an adjustable time delay, and a stub roll compartment that enables complete use of the paper rolls. The result is more precise control of consumption and substantial reductions in supply waste and labor for refills.

Installation options include mounting directly to a wall, installing within a recessed wall opening, or retrofitting seamlessly into a stainless steel recessed towel cabinet.

The Tork Matic is a mechanical, portion-controlled, touch-free dispensing system designed for high-traffic restrooms in office and public buildings, as well as in industrial, healthcare and foodservice settings.

Like the Tork Intuition, the Tork Matic delivers one towel at a time, every time. An automatic paper-feeding mechanism makes the dispenser easy to load and saves

time. There is also a stub-roll feature that ensures complete roll usage. A roll capacity of 700 feet further cuts maintenance costs by reducing the need for roll changes.

The Intuition and the Tork Matic use the same three towel rolls. This simplifies ordering, saves storage space, and makes it easier to have the right mix of dispensers.

All Tork towel dispensers utilize the same key for easy maintenance.

M-Tork Centerfeed Dispensing: M-Box, M-Box Pro, Tork M-Box Mini

Ideal for high-traffic washrooms where easy, one-hand dispensing is desired, M-Tork Centerfeed dispensers are designed for environments where system efficiency is important and highly absorbent paper needs to be readily accessible.

The reliable dispensing mechanism offers one towel at a time with end-users touching only the towel they take. The centerfeed dispensers offer high-capacity and easy-loading features that reduce labor costs. All three dispensers operate without a handle, crank or lever. All three work with a choice of three highly absorbent towel products.

Tork M-Box Pro WT

This watertight version of the M-Box Pro is designed for use in wet, humid or washdown-required areas such as food-processing facilities and food-prep kitchens. The Tork M-Box WT keeps paper towels dry, even during washdown, and its no-touch dispensing promotes hygiene. An optional mounting bracket allows the entire unit to be easily removed from the wall for cleaning. The WT is ADA and HACCP compliant. Like the other M-Box dispensers, the WT is compatible with three quality towels.

Tork Xpress Dispensing: Tork Xpress, Tork Xpress Mini And Tork Xpress Portable

Three classically designed dispensing systems offer a selection of premium-

quality interfolded towels that are delivered one at a time, every time. The wall mount Tork Xpress and the smaller Xpress Mini have a hygiene shield that protects towels until they are ready to be used. The Tork Xpress Portable is perfect for countertops and offers the convenience of portability.

Tork Bath Tissue Dispensing: T-Tork, T-Tork Mini, Twin T-Tork, Twin T-Tork Mini

With an option for every washroom, from upscale to high-traffic, Tork bath tissue dispensing systems all dispense a variety of high-quality tissue rolls. From single to two-roll dispensers, from full size to reduced footprint, Tork bath tissue dispensers have covered roll features to promote hygiene and feature reserve rolls for longer service intervals and fewer run-outs.

Tork Soap Dispensing

Good for all washroom environments, this high-capacity dispenser offers portion control and no-drip, no-clog savings. The dispenser uses high-quality, mild PH-balanced soaps and an optional hygienic arm level that dispenses soap using the elbow. Stylish design complements other Tork washroom dispensers for a coordinated look.

Tork Wipers: Foodservice, Industrial

No matter what the task, Tork has a

wiper that is designed specifically to meet the need. Foodservice wipers are color-coded to prevent cross-contamination and ensure the right wipe is used for the right task. Tork industrial wipers are specifically engineered for strength and durability. From soaking up oil to cleaning machinery to no-lint auto body prepping, Tork has the perfectly suited wiper solution.

SCA Americas' Headquarters Facility Certified Green By U.S. Green Building Council's LEED Program

The new headquarters facility for SCA Americas, the parent operation of SCA Tissue North America, has been certified as a LEED-CI Gold interior space. The certification recognizes environmental excellence in tenant interior architecture and construction achievement.

The U.S. Green Building Council certified this design and construction project according to various levels of environmental sustainability through a program called Leadership in Energy and Environmental Design (LEED). More than 30 sustainable strategies were executed to align the design and construction with SCA's commitment to environmentally sound business.

"SCA is committed to being stewards of the environment in which we work and live," said Thomas Wulkan, President of SCA Americas. "We have worked hard to create an office space that supports our core values of respect, excellence and responsibility. We are thrilled to have received this recognition from the U.S. Green Building Council."

Located in the Cira Centre in Center City Philadelphia, the new SCA Americas' headquarters facility occupies 81,200 square feet and three of the high-rise building's 28 floors. Unique features of the design

include: HVAC system optimization, increased energy efficiency, installation of more than 90 percent EPA Energy-Star rated office equipment, recycling of about 81 percent of construction-related waste, and using more than 50 percent local materials and more than 32 percent recycled materials in construction.

The new facility is one of the first nationally recognized projects using the LEED for Commercial Interiors (LEED-CI) Rating System. SCA Tissue is an active member of the U.S. Green Building Council and a participant and sponsor of green initiatives such as the annual USGBC Green Build Conference.

The LEED certification testifies to the ongoing commitment to environmental stewardship that pervades the business practices of SCA Tissue and its parent company.

SCA Tissue recently became the first sanitary paper manufacturer in the United States to meet the rigorous, comprehensive standards of the Environmental ChoiceM Program, North America's leading and largest benchmark of environmentally friendly products and services. The program measures total environmental impact in areas such as resource and energy consumption, effluent discharge and process-produced solid waste.
